

Score: 22/20
Great work!

Physics Midterm 2

11-21-22

1.) a.

b. $F = ma$

$$F = T - f - mg \rightarrow ma = T - f - mg \rightarrow a = \frac{T - f - mg}{m}$$

$$a = \frac{1.25 \times 10^7 \text{ N} - 4.5 \times 10^6 \text{ N} - (5 \times 10^5 \text{ kg})(9.8 \text{ m/s}^2)}{5 \times 10^5 \text{ kg}}$$

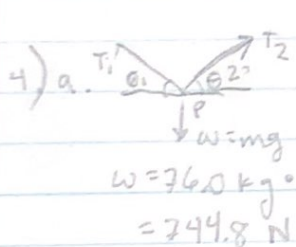

$$a = 6.20 \text{ m/s}^2$$

2.) a. -700 N

3rd law is equal + opposite.

You're right, but it's no trick =)

3.) $F = ma \rightarrow a = 200 \text{ m/s}^2$, $m = 2000 \text{ kg}$
 $F = 2000 \text{ kg} \cdot 200 \text{ m/s}^2 + 1000 \text{ N}$
 $F = 401000 \text{ N}$

$\theta_1 = 75^\circ$, $\theta_2 = 10^\circ$

b. $F_{\text{net}, x} = T_2 \cos \theta_2 - T_1 \cos \theta_1$

$$0 = T_2 \cos \theta_2 - T_1 \cos \theta_1$$

$w = mg$
 $w = 76.0 \text{ kg} \cdot 9.8 \text{ m/s}^2$
 $= 744.8 \text{ N}$

c. $F_{\text{net}, y} = T_1 \sin \theta_1 + T_2 \sin \theta_2 - mg$

$$0 = T_1 \sin \theta_1 + T_2 \sin \theta_2 - mg$$

d. hori.

$$T_1 \cos \theta_1 = T_2 \cos \theta_2$$

$$T_1 \cos(75^\circ) = T_2 \cos(10^\circ)$$

$$\frac{T_1 \cdot 0.259}{0.259} = \frac{T_2 \cdot 0.985}{0.259}$$

$$T_1 \sin(75^\circ) + T_2 \sin(10^\circ) = mg$$

$$\frac{T_1 \cdot 0.985}{0.259} + \frac{T_2 \cdot 0.174}{0.259} = 76.0 \text{ kg} \cdot 9.8 \text{ m/s}^2$$

$$T_1(3.67) + T_2(0.174) = 744.8$$

$$T_1(3.67 + 0.174) = 744.8$$

$$T_2 = \frac{744.8}{3.844} = 193.76 \text{ N}$$

$$T_1 = 193.76 \cdot \frac{0.985}{0.259} = 736.87 \text{ N}$$

So $T_1 = 736.87 \text{ N}$

$T_2 = 193.76 \text{ N}$

3.1.) a. $F_{\text{max}} = \mu_s N$

$$= \mu_s mg$$

$$= (0.5)(120 \text{ kg})$$

$$(9.8 \text{ m/s}^2)$$

$$= 588 \text{ N}$$

b. $\frac{mg}{m} = \frac{600 \text{ N} - \mu_k mg}{m} \rightarrow a = \frac{600 \text{ N} - (0.3)(120 \text{ kg})(9.8 \text{ m/s}^2)}{120 \text{ kg}} = 2.06 \text{ m/s}^2$

$$2.) \quad \cancel{mg} \sin \theta - \mu_k \cancel{mg} \cos \theta = \cancel{m} a$$

$$g (\sin \theta - \mu_k \cos \theta) = a$$

$$a = 9.8 \text{ m/s}^2 (\sin(25^\circ) - 0.1 \cos(25^\circ))$$

$$\boxed{a = 3.25 \text{ m/s}^2}$$

$$3.) \quad F_D = \frac{1}{2} C_p A v^2$$

$$= \frac{1}{2} (0.75) (1.225 \text{ kg/m}^3) (0.75 \text{ m}^2) (40 \text{ m/s})^2$$

$$\boxed{551.25 \text{ N}}$$

$A = 0.75 \text{ m}^2$ $\rho = 1.225 \text{ kg/m}^3$ $C = 0.75$

$$4.) \quad \frac{F}{A} = \gamma (\Delta x / L) \Rightarrow \gamma = \frac{F/A}{\Delta x / L}$$

$$\gamma = \frac{(2300 \text{ kg}) (9.8 \text{ m/s}^2) / (2.5 \text{ m}^2)}{(0.003 \text{ m}) / (10 \text{ m})}$$

$$\boxed{\gamma = 5.01 \times 10^7 \text{ N}}$$

$L = 10 \text{ m}$
 $\Delta x = 3 \text{ mm}$
 $F = 2300 \text{ kg} \cdot 9.8 \text{ m/s}^2$
 $A = 2\pi rh + 2\pi r^2$
 $\text{area of a cylinder} = 2.5 \text{ m}^2$

$$4.1.) \quad \text{linear vel.} = 144 \text{ km/hr} \cdot \frac{1000 \text{ m}}{1 \text{ km}} \cdot \frac{1 \text{ hr}}{3600 \text{ s}} = 40 \text{ m/s}$$

$$v = r\omega$$

$$\omega = \frac{v}{r} \rightarrow \frac{40 \text{ m/s}}{0.5 \text{ m}} = \boxed{80 \text{ rad/sec}}$$

$r = 0.5 \text{ m}$

$$2.) \quad v = \sqrt{rg \tan \theta}$$

$$\tan \theta = \frac{v^2}{rg}$$

$$\tan \theta = \frac{(33.33 \text{ m/s})^2}{(900 \text{ m} \cdot 9.8 \text{ m/s}^2)}$$

$$= \frac{1110.89}{8820}$$

$g = 9.8$ $\frac{130 \text{ km}}{1 \text{ hr}} \cdot \frac{1000 \text{ m}}{1 \text{ km}} \cdot \frac{1 \text{ hr}}{3600 \text{ s}} = 33.33 \text{ m/s}$
 $0.9 \text{ km} \cdot \frac{1000 \text{ m}}{1 \text{ km}} = 900 \text{ m}$

$$\tan \theta = 0.12595$$

$$\tan^{-1}(0.12595) = \boxed{7.18^\circ}$$

3.) a. path 2 because path 1 will have a greater angular velocity.

b. $F_s = \mu_s mg$
 $\mu_s mg = \cancel{m} v^2 / r$
 $\mu_s = \frac{v^2}{gr}$
 $0.1 = \frac{v^2}{(9.8 \text{ m/s}^2)(400 \text{ m})}$

$v^2 = \sqrt{(0.1)(5920 \text{ m}^2/\text{s}^2)}$
 $v^2 = \sqrt{392}$
 $v_1 = 20 \text{ m/s}$
 $v^2 = \sqrt{(0.1)(9.8 \text{ m/s}^2)(800 \text{ m})}$
 $\boxed{v_2 = 28 \text{ m/s}}$

$$4.) a. \vec{F}_g = \frac{GM}{r^2}$$

$$G = 6.67430 \times 10^{-11} \frac{N \cdot m^2}{kg^2}$$

$$M = 1.4 \times 10^{22} kg$$

$$r = 4.5 \times 10^{12} m$$

$$\vec{F}_g = \frac{(6.67430 \times 10^{-11} N \cdot m^2 / kg^2)(1.4 \times 10^{22} kg)}{(4.5 \times 10^{12} m)^2}$$

$$\vec{F}_g = 4.61 \times 10^{-14} m/s^2$$

$$b. \vec{F}_g = \frac{GM}{r^2}$$

$$G = 6.67430 \times 10^{-11} \frac{N \cdot m^2}{kg^2}$$

$$M = 8.62 \times 10^{25} kg$$

$$r = 2.5 \times 10^{12} m$$

$$= \frac{(6.67430 \times 10^{-11} \frac{N \cdot m^2}{kg^2})(8.62 \times 10^{25} kg)}{(2.5 \times 10^{12} m)^2}$$

$$= 9.21 \times 10^{-10} m/s^2$$

compare:

$$\frac{g}{g} = \frac{9.21 \times 10^{-10} m/s^2}{4.61 \times 10^{-14} m/s^2} = 2.0 \times 10^4$$

(+2) Bonus! Well done.
