

Friday warm-up: unit analysis and vectors

Prof. Jordan C. Hanson

August 22, 2025

1 Chapter 1 - Unit analysis

- Convert 100 km hr^{-2} to m s^{-1} :
 - A: 27.8 m
 - B: 27.8 m s^{-1}
 - C: 360 m
 - D: 360 m s^{-1}
- Convert 30 miles to km. *Hint: 1 mile is 1.6 km.*
 - A: 24 km
 - B: 36 km
 - C: 48 km
 - D: 60 km
- An empty pool has a volume of 30 m^3 . If we must fill the pool with barrels of water, each with a volume of 100 liters, how many barrels of water are needed to fill the pool? *Hint: 1 liter is 1000 mL, and 1 mL is 1 cm^3 .*
 - A: 3 barrels
 - B: 30 barrels
 - C: 300 barrels
 - D: 3000 barrels
- How many seconds are in a year? (*This is important for calculations involving cumulative exposure to radiation*).
 - A: 10^4 seconds
 - B: 10^5 seconds
 - C: 10^6 seconds
 - D: 10^7 seconds

2 Chapter 2 - Vectors

- Suppose a ship leaves an island, heading Northeast, at 25 km hr^{-1} . After 1 hour, the ship turns North and continues at the same speed for another hour. What is the final location of the ship?
 - A: (17.7,17.7) km
 - B: (35.5,35.5) km
 - C: (17.7,42.7) km
 - D: (35.5,60.5) km
- If an aircraft flies North for 100 km, and then flies 100 km East (to avoid a mountain range), how far is the craft from the original location?
 - A: 70.7 km
 - B: 141.4 km
 - C: 200 km
 - D: 100 km
- Let us introduce the $\hat{i}\hat{j}\hat{k}$ notation for vectors.** The vector \hat{i} has no units, and a length of 1 in the x-direction. The \hat{j} vector is identical to \hat{i} , but pointed in the y-direction. The vector \hat{k} goes with the z-direction. Compute the following:
 - $\vec{x} = 2\hat{i} + 2\hat{j}$, and $\vec{y} = -2\hat{i} + 2\hat{j}$. $\vec{x} + \vec{y} =$
 - $\vec{x} = 2\hat{i} + 4\hat{j}$, and $\vec{y} = 2\hat{i} - 4\hat{j}$. $\vec{x} + \vec{y} =$
 - $\vec{x} = \hat{i} + \hat{j}$, and $\vec{y} = \hat{i} - \hat{j}$. $\vec{x} - \vec{y} =$
