Syllabus for Calculus-Based Physics-1: Mechanics (PHYS150-01)

Dr. Jordan Hanson - Whittier College Dept. of Physics and Astronomy

October 30, 2017

Abstract

The concepts of calculus-based mechanics will be presented within the context of interactive problem-solving. First, the concepts of displacement, velocity, and acceleration in one and two dimensions will be introduced, building up to Newton's Laws of motion. Next, the concepts of friction and rotational motion will be added. More complex problems will be introduced through the conservation of energy and linear momentum, followed by the rotational equivalents. The course work will include interactive computational exercises, analytic textbook problems, and lab-based activities.

Pre-requisites: MATH139A, or MATH141A (may be concurrent). **Course credits, Liberal Arts Categorization**: 4 credits, COM1

Regular course hours: Monday, Wednesday, and Friday from 12:50 - 14:20 in SLC 228

Instructor contact information: jhanson2@whittier.edu, tel. 562.907.5130

Office hours: Mondays at 15:00, and Tuesdays at 8:50 in SLC 212

Attendance/Absence: In-class activities will serve as attendance (see **Grading**). Students needing to reschedule midterms and exams should notify the professor a reasonable time beforehand.

Late work policy: Late work will not be accepted.

Text: University Physics Volume One - https://openstax.org/details/books/university-physics-volume-1

Grading: There will be four 45-minute quizzes, each examining conceptual understanding in step-by-step problems. Each quiz is worth 10% of the final grade. The ExpertTA system (\$30.00 online) will manage the homework sets, which are due weekly and worth 20% of the grade. Interactive in-class activities will be worth 15% of the final grade. Lab groups will present results of a group project worth 10% of the grade. The final exam will be held on December 13th for a full class-period, and will be worth 15% of the grade.

Grade Settings: <60% = F, >60%, $\le 70\%$ = D, >70%, $\le 80\%$ = C, >80%, $\le 90\%$ = B, <90%, $\le 100\%$ = A. Pluses and minuses: 0-3% minus, 3%-6% straight, 6%-10% plus (e.g. 79% = C+, 91% = A-)

Homework sets: Typically 5-8 problems per week, through the ExpertTA system, assigned and due Mondays. To sign up for ExpertTA, go to

ADA Statement on Disability Services: The Americans with Disabilities Act (ADA) is a federal anti-discrimination statute that provides comprehensive civil rights protection for persons with disabilities. Among other things, this legislation requires that all students with disabilities be guaranteed a learning environment that provides for reasonable accommodation of their disabilities. If you believe you have a disability requiring an accommodation, please contact Disability Services: disabilityservices@whittier.edu, tel. 562.907.4825.

Academic Honesty Policy: http://www.whittier.edu/academics/academichonesty **Course objectives**:

- Written expression of quantitative and numerical ideas and arguments.
- Oral expression of quantitative and numerical ideas and arguments.
- · Problem solving using numerical skills.
- · Mathematical modeling.
- · Logical thinking.
- · Analysis of data and results.

- 1. Week 1 September 6th through September 8th Chapter 1, Chapters 2.1-2.3, 3.1
 - (a) Estimations, approximations, unit-analysis, and coordinate systems
 - (b) Adding and subtracting vectors, displacement and translational motion
 - (c) Mathematics review: limits, derivatives, integrals
- 2. Week 2 September 11th through September 15th Chapters 3.2-3.6
 - (a) Instantaneous velocity and acceleration
 - i. Mathematics review: single-variable differentiation
 - (b) Accelerration due to gravity near the Earth's surface and other constant accelerations
 - (c) Common equations of motion for constant acceleration
- 3. Week 3 September 18th through September 22nd Chapters 4.1-4.3,4.5
 - (a) Velocity and acceleration vectors, vector components
 - (b) Combination of vector components and free-fall: projectile motion
 - (c) Relative motion, reference frames
- 4. First midterm exam, beginning of week 4
 - (a) Estimations, approximations, unit-analysis, and basic calculus problems
 - (b) Displacement, velocity, and constant acceleration
 - (c) Vectors and relative motion
- 5. Week 4 September 25th through September 29th Chapters 5.1-5.7
 - (a) Newton's First Law
 - (b) Newton's Second Law
 - (c) Newton's Third Law
 - (d) Examples and free-body diagrams
- 6. Week 5 October 2nd through October 6th Chapters 4.4, 6.2-6.4
 - (a) Uniform circular motion, centripedal acceleration, centripedal force
 - (b) Frictional forces
 - (c) Drag
- 7. Week 6 October 9th through October 13th Chapters 7.1-7.4, 8.1
 - (a) Work, kinetic and potential energy
 - (b) Power
 - i. Mathematics review: single-variable differentiation and integration
- 8. Second midterm exam, beginning of week 7
 - (a) Newton's laws and free-body diagrams
 - (b) Circular motion
 - (c) Friction
- 9. Week 7 October 16th through October 19th Chapters 8.2-8.3
 - (a) Definitions of a conservative force
 - (b) Conservation of energy
 - i. Mathematics review: the fundamental theorem of calculus in one variable
 - ii. Graphical and other notions of energy conservation
- 10. Mid-semester break, October 20th
- 11. Week 8 October 23rd through October 27th Chapters 9.1-9.6
 - (a) Linear momentum and momentum conservation
 - (b) Scattering in one and two dimensions
 - (c) Center of mass

- 12. Week 9 October 30th through November 3rd Chapters 10.1-10.5
 - (a) Rotational variables and rotational acceleration
 - (b) Moments of inertia and rotational kinetic energy
 - i. Mathematics review: volume integrals
- 13. Third midterm exam, beginning of week 10
 - (a) Work, kinetic energy
 - (b) Conservative versus non-conservative forces
- 14. Week 10 November 6th through November 10th Chapters 10.6 10.8
 - (a) Torque and Newton's Laws in rotating systems
 - (b) Work and energy in rotating systems
- 15. Week 11 November 13th through November 17th Chapter 11
 - (a) Rolling motion
 - (b) Angular momentum and angular momentum conservation
- 16. Forth midterm exam, beginning of week 12
 - (a) Rotational motion, moments of inertia, rotational kinetic energy
 - (b) Torque and Newton's Laws in rotational form
 - (c) Angular momentum conservation
- 17. Week 12 November 20th and November 21st Chapter 13
 - (a) Newton's law of gravitation
 - (b) Orbital motion
 - (c) Orbital energy
- 18. Week 13 November 27th through December 1st Class Presentations and Final Review
 - (a) In-class presentations
 - (b) Final exam preparations
 - (c) Covering topics deemed necessary by classmates
- 19. Week 14 December 4th through December 8th Final review
