Monday Reading Assessment: Unit 0, and vectors

Prof. Jordan C. Hanson

September 11, 2019

1 Chapter 2.3 - Algebra of Vectors

- 1. Which of the following is a correct expression for the multiplication of a scalar a and a vector $\vec{p} = p_x \hat{i} + p_y \hat{j}$?
 - A: $a\vec{p} = ap_x\hat{i} + p_y\hat{j}$
 - B: $a\vec{p} = p_x\hat{i} + ap_y\hat{j}$
 - C: $a\vec{p} = ap_x\hat{i} + ap_y\hat{j}$
 - D: $a\vec{p} = ap_x + ap_y$
- 2. Suppose a displacement vector \vec{x} has a magnitude $|\vec{x}|$. Which of the following best describes the quantity $\vec{x}/|\vec{x}|$?
 - A: $\vec{x}/|\vec{x}|$ is a scalar number with the magnitude of \vec{x} .
 - B: $\vec{x}/|\vec{x}|$ is a vector with the magnitude of \vec{x} .
 - C: $\vec{x}/|\vec{x}|$ is a vector with magnitude of zero.
 - D: $\vec{x}/|\vec{x}|$ is a vector with magnitude of one.
- 3. Figure 1 contains a 2D coordinate system containing four vectors representing the forces with which four puppies pull a toy. Suppose the angles α , β , and γ are all 45 degrees instead of those given, and suppose each puppy pulls with equal force. (a) If Dug pulls with equal force as well, what angle must Dug's force vector make with the x-axis if the net force is zero? (b) If Dug lets go and the only puppies pulling are A, B, and C, in which direction will the toy accelerate?

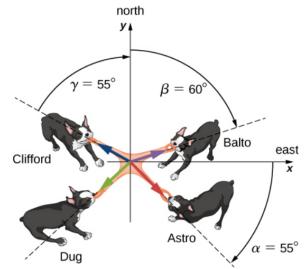

Figure 2.25 Four dogs play a tug-of-war game with a toy.

Figure 1: A diagram of the vectors of "force" from four puppies pulling in different directions.
